Leadnify — Project Status Update

Prepared for: Neil Naran (ValueREIS)
Re: 10/18 “Changes” list — progress + what we need from you
Date: October 28, 2026
Live site: leadnify.io

1. What we have completed

All of the items below are **built, deployed, and live** on leadnify.io. (Tip: hard-refresh the page, or open an incognito window, to clear your browser cache and see the latest.)

Property & Listings

- **Property Pictures** — Video files are now blocked, and any image over **15 MB** is rejected with a clear error message.
- **Pre-Saved Fields — Property Address** — Street and Zip are saved separately, so the edit form keeps the full address instead of coming back blank.
- **Deal Agents / Contacts** — The full list of agents and contacts on a deal is saved and reloads correctly.
- **Cover Picture disappearing after 24–48 hours — FIXED** — Two open browser sessions were overwriting each other’s data; we added a **live sync** so covers/data are no longer lost.
- **OM & Saved Pictures** — The Offering Memorandum and gallery photos now stay attached everywhere and survive reopening.
- **Featured listings** — Capped at a maximum of **5**.

Leads & CRM

- **Duplicate leads — FIXED** — The same inquiry no longer appears twice. (Duplicates created before the fix need a one-time manual delete.)
- **Select + Delete leads** — Checkbox select, Select-All, and bulk delete with a confirmation popup. (Raw captured data is always preserved.)
- **Lead routing** — Lead and OM-download notifications now go to the deal’s **agent(s)** only (falls back to info@valuereis.com).
- **Lead Source** — Editable dropdown per lead; you can add and remove your own custom sources.
- **“Leads by Source” report** — Lead count and % grouped by source.
- **Geography Map — “Leads by State”** — Inquiry and Add-Lead forms capture the lead’s State; each property shows a color-coded breakdown. (Only new leads carry a state.)
- **Reports date range** — All-time / 30d / 90d / 1yr toggle now actually filters the data.
- **Activity & Pipeline metrics** — Now show real, live numbers instead of static placeholders.

Team & Settings

- **Microsite link moved to Settings** (admin-only); the old “Public URL” card and “Share microsite” button were removed from My Deals.
- **Coordinator role** added as a full working role with the correct permissions.
- **Role explanations** — A “What each role can do” card.
- **Team Settings improvements** — Member-count summary, per-role chips, search, active indicator, per-member deals/leads counts, and join date.

- **“Done” buttons** added where edit screens lacked a clear exit, plus “changes save automatically” notes.

---

2. What we need from you to finish the rest

Six items from your list are **ready to build** — they are only waiting on accounts, access, or a decision from your side. Once you provide these, we’ll complete them.

#	Item	What we need from you
1	Constant Contact (email campaigns)	Constant Contact account login **+ API key**
2	LinkedIn auto-posting (social)	A **LinkedIn Developer App** (Client ID + Secret) and approval for LinkedIn’s Posts API
3	AI SEO (Sniper / Shotgun ads)	A **Google Ads or Meta Ads** account **+ an ad budget**, plus an **Anthropic (AI) API key**. Please confirm which platform to start with.
4	Auto-Population from Address	A **data / Google Places API key + cost approval**. (Population & aerial map are free; traffic, local employers, and tenants need a paid key.)
5	Re-Design / new logo	A **designer** to refresh the look and provide a new logo (a design task, not a code task).
6	Admin Portal	Just a **decision** — no account or cost needed: **Option A** — make the existing “Team & Permissions” page the Admin Portal (Owners/Admins only); or **Option B** — a brand-new separate Admin Portal page.

Plus one quick question for Josh: please confirm the final list of **lead-source categories** you’d like in the dropdown. (The lead-source feature itself is already built and live.)

---

3. Bottom line

- Everything on your list that we could build on our side is **done and live**.
- The **6 items above** are the only ones remaining, and each is blocked on one of: an account/API key, an ad budget, a designer, or your decision (Admin Portal).
- As soon as you provide these, we’ll build them and the full changes list will be **100% complete**.

Please reach out with any questions — happy to walk through any of these live.
